Report on Water Level Conditions of Beaufort, Jasper, Colleton, and Hampton Counties During March of 1984

By
H.D. Spencer
1984

INTRODUCTION

The following report is an update of Potentiometric Water Level conditions in the Low Country area of South Carolina. This report is based on data gathered in March of 1984.

A higher degree of accuracy was obtained from data collected in March of 1984 than from data used in past reports. Several monitoring wells that were previously measured were eliminated due to misleading implementations. In other words, the quantity of water level measurements was relinquished in order to obtain better quality measurements. However, the map enclosed is sketchy in the grids where monitoring wells were omitted. Future fieldwork will alleviate this problem.

Copies of this report are available in the SCDNR's Columbia office.
